

So you want to be a Doctor?

WELCOME FUTURE DOCTORS!

elcome to *So You Want to Be a Doctor?* — a book about the most amazing machine in the universe: your own body.

Have you ever wondered how your heart beats, your lungs fill with air, or your brain tells your fingers to wiggle? Or maybe you've imagined wearing a white coat, carrying a stethoscope, and helping people feel better. If so, you're in the right place!

Being a doctor is like being a detective, an engineer, and a superhero all at once. You'll figure out what's happening inside the body, understand how the systems work together, and then use that knowledge to help people. Doctors solve mysteries every day—some are simple, like a cold, and some are very complex, like heart or brain surgery.

So you want to be a Doctor?

But before you put on your white coat, you need to understand the building blocks of your body. That's exactly what this book will help you do. You'll explore cells, tissues, organs, and systems. You'll see how bones, muscles, blood, nerves, and hormones all work together to keep you alive, moving, and thinking. And yes—you'll also learn how real doctors use this knowledge every day.

BEFORE WE START

Curiosity is your superpower. Ask questions, explore, and experiment. Doctors never stop learning. The human body never stops throwing surprises, so doctors will never know it all. Always be ready to question everything you know.

Mistakes are part of learning. Doctors often may have to try multiple solutions before finding the right one. In this book, you will have the opportunity to analyze symptoms and guess at medical causes. Never be discouraged if you don't get it right the first time.

Brain

Liver

Heart

Your body is amazing and sometimes weird. From hiccups to sneezes to goosebumps, your body's full of surprises.

WHAT DO DOCTORS DO?

Doctors do more than just prescribe medicine. They are scientists, problem-solvers, and teachers, using both observation and technology to understand the body. Here's a closer look at what they do.

Diagnosticians (Medical Detectives)

Some doctors examine symptoms, run tests, and look for patterns to figure out what's happening inside the body.

Researchers

Some doctors study diseases at the molecular or cellular level, discovering how tiny cells work together—or fail.

Surgeons

These doctors perform precise operations to repair injuries, remove tumors, or replace parts like joints.

Preventive Specialists

Many doctors teach people how to prevent illnesses by making sure you get the proper nutrition, vaccinations and maintain hygiene.

Job

Titles of Doctors

There are many kinds of doctors, and each one has a special job to help people stay healthy. Some take care of children, some fix bones, and some help with feelings or the heart. Let's meet the different doctors and learn what they do!

 **Allergist / Immunologist** (AL-er-jist / im-yoo-NOL-uh-jist)
– treats allergies and the immune system

 **Anesthesiologist** (an-ess-thee-zee-OL-uh-jist)
– helps patients sleep and feel no pain during surgery

 **Cardiologist** (kar-dee-OL-uh-jist)
– treats the heart

 **Dermatologist** (dur-muh-TOL-uh-jist)
– treats skin, hair, and nails

 **Emergency Medicine Doctor** (ee-MER-jen-see)
– helps people in emergencies

 **Endocrinologist** (en-doh-kruh-NOL-uh-jist)
– treats hormones

 **Family Medicine Doctor**
– cares for the whole family

 **Gastroenterologist** (gas-troh-en-ter-OL-uh-jist)
– treats the stomach and digestion

 **Gynecologist** (guy-nuh-KOL-uh-jist)
– treats women's health

 **Infectious Disease Specialist**
– treats infections and germs

 **Internist** (in-TER-nist)

So you want to be a Doctor?

- treats adult illnesses

 **Nephrologist** (nef-ROL-uh-jist)

- treats the kidneys

 **Neurologist** (nyur-OL-uh-jist)

- treats the brain and nerves

 **Obstetrician** (ob-stuh-TRISH-un)

- cares for pregnant mothers and babies

 **Oncologist** (on-KOL-uh-jist)

- treats cancer

 **Ophthalmologist** (off-thal-MOL-uh-jist)

- treats the eyes

 **Orthopedist** (or-thuh-PEE-dist)

- treats bones and muscles

 **Otolaryngologist (ENT)** (oh-toh-lair-in-GOL-uh-jist)

- treats ears, nose, and throat

 **Pathologist** (puh-THOL-uh-jist)

- studies blood and tissues

 **Pediatrician** (pee-dee-uh-TRISH-un)

- cares for babies and children

 **Physiatrist** (fiz-eye-AT-rist)

- helps people recover movement

 **Primary Care Physician** (PRY-mair-ee)

- helps keep people healthy

 **Psychiatrist** (sigh-KY-uh-trist)

- treats mental health

 **Pulmonologist** (pull-muh-NOL-uh-jist)

- treats the lungs

So you want to be a Doctor?

 **Radiologist** (ray-dee-OL-uh-jist)
– reads X-rays and scans

 **Rheumatologist** (roo-muh-TOL-uh-jist)
– treats joints and immune diseases

 **Surgeon** (SUR-jun)
– performs operations

 **Urologist** (yur-OL-uh-jist)
– treats the urinary system

The Human Body : A Team Of Systems

The human body is an incredible network of systems working together to keep us alive, balanced, and healthy. **In the chapters ahead, we will explore each major body system**—how it is structured, what it does, and how it supports the others. Understanding these systems helps us see how the body functions as a whole, starting with the framework that supports it all: the skeletal system.

Explore the Amazing Human Body!

What's really happening inside your body when you run, get sick, or break a bone? How do doctors figure out what's wrong, and how do they fix it?

In ***So You Want to Be a Doctor. All About the Human Body***, you'll explore the human body one system at a time, from bones and muscles to the brain, heart, and lungs. You'll discover how each system works, what happens when it doesn't, and how symptoms give doctors clues about what's going on inside.

Written especially for 6th-8th graders, this book goes beyond facts and helps you ***think like a doctor***. You'll analyze symptoms, connect ideas and practice real medical thinking during these formative years.

Whether medicine is a dream or just something you're curious about, this book invites you to ask questions, solve problems, and explore the science that keeps you alive.

“

The book offers a clear, glimpse into what becoming a physician truly involves, making it ideal for young students beginning to explore an interest in medicine
